                                                                                                                                                                                                                                                                                                              ઠ
                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel composition comprising: a substance that modulates the status of a protein comprising a sequence with a fully defined 2466 or 3136 amino acid sequence given in the specification; or a molecule that is immobilised by a protein comprising a sequence with a fully defined 2466 or 3136 amino acids, where the status of a cell a cypressing the protein is modulated. The invention further relates to: an antibody; a non-human transgenic animal or hybridoma that produces the antibody; a method of delivering a cytotoxic or diagnostic agent to a cell that expresses the protein; a polymucleotide that encodes the protein; a method for inhibiting the growth of cancer cells that express the protein; a method detecting in a sample the presence of a 10193A11 created protein or polymucleotide; and method for monitoring one or more 10193A11 gene products in a blological sample from a patient having concer. The novel composition has cytostatic activity. The composition is useful for preventing or treating cancer concern. This sequence represents a peptide derived from the 10193A11 concerns. This sequence represents a peptide derived from the 10193A11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

```
Removing amino-terminal dipeptides from a precursor polypeptide, involves contacting the precursor polypeptide with Dictyostellum dipeptidase enzyme obtainable from Dictyostellum discoideum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiAIDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a method of removing an amino-terminal dipeptide from a precursor polypeptide. The method involves contacting the pecursor polypeptide with a Dictyostelium dipeptidylaminopeptidase (dDAP) enzyme obtainable from Dictyostelium discoideum. This sequence represents a peptide substrate used to study the action of dDAP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       36.4%; Score 28; DB 5; Length 10;

The invention relates to a novel composition comprising: a substance that

modulates the status of a protein comprising a sequence with a fully

defined 2466 or 3136 amino acid sequence given in the specification; or a

molecule that is immobilised by a protein comprising a sequence with a

cully defined 2466 or 3136 amino acids, where the status of a cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel composition comprising: a substance that modulates the status of a protein comprising a sequence with a fully defined 2466 or 3136 amino acid sequence given in the specification; or a molecule that is immobilised by a protein comprising a sequence with a fully defined 2466 or 3136 amino acids, where the status of a cell chily defined 2466 or 3136 amino acids, where the status of a cell chily defined 2466 or 3136 amino acids, where the status of a cell chily defined 2466 or 3136 amino acids, where the status of a cell chilpody; a mon-human transgenic animal or hybridoma that produces the antibody; a method for delivering a cytotoxic or diagnostic agent to a cell that expresses the protein; a method for inhibiting the growth of cancer cells that express the protein; a method detecting in a sample the presence of a 101P3A11 con the protein; a method detecting in a sample the presence of a 101P3A11 con suspected of having cancer. The novel composition has cytostatic activity. The composition is useful for preventing or treating cancer e.g. activity. The composition is useful for preventing or treating cancer e.g. cancer. This sequence represents a peptide derived from the 101P3A11 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising 101P3A11-related protein, useful for preventing or treating cancer e.g., stomach, cervix, uterus, rectum, prostate, colon, kidney or breast cancer.
                                                            transgenic animal; cytotoxic; cancer; immune; 101P3A11; cytostatic; stomach; cervix; uterus; rectum; prostate; colon; kidney; breast.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a method for making a diagnosis of an antigen. The method involves identifying the binding specificity of the anti-antigen antibody molecules in serum by the antibody detection by antigen minutes (ADAM) methodology. The method comprises screening phage libraries using sera from antigen-infected and non-infected individuals, and identifying peptides binding antibodies (ligands) specifically associated with the antigen. The method of the invention can be used for the detection of infectious agents, particularly Hepatitis C virus (HCV). The invention provides HCV-specific ligands which are useful for the preparation of a diagnostic assay for detecting HCV infection in a subject. The HCV-specific ligands are also useful for the preparation of a gainst HCV. ABG76670-ABG76743 represent HCV-specific ligands
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Making diagnosis of antigen, by identifying binding specificity of antiantigen antibody molecules in serum by antibody detection by antigen mimics methodology, and identifying antibodies associated with antigen.

ö
                   comprising one or more single nucleotide polymorphisms (SNPB). ABB56531 to ABB56903 represent human peptides encoded by some of the SNP oligonucleotides. The sequences from the present invention can have immunosuppressive, cytostatic, antiinflammatory, neuroprotective and antimicrobial activities. Nucleic acids, polypeptides, oligonucleotides and antibodies from the present invention can be used for treating a subject suffering from, at risk for, or suspected of, suffering from a pathology acribed to the presence of a sequence polymorphism. The pathology may be autoimmune diseases, inflammation, cancer, diseases of the nervous system, and infection by pathogenic microorganisms. The SNPs are also useful for determining which forms of a characterised polymorphism are present in individuals. The antibodies may be used in the detection, quantitation and/or cellular or tissue localisation of a
                                                                                                                                                                                                                                                                                                                                                                                                                             polymorphic protein (e.g., for use in measuring levels of the polymorphic protein within appropriate physiological samples)

pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myslin basic protein (MBP) to polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the collerising an individual to that polypeptide. In both cases, the corresponding to a sequence motif for a MHC class II protein, such as HLA DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with the autoimmune disease. This peptide is an internal peptide of Epstein. Barr virus DNA polymerase and is implicated as a foreign epitope involved in the aetiology or in remissions of multiple sclerosis. It has been is solated from multiple sclerosis patients. (Updated on 16-OCT-2003 to etandardise OS field)
                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pemphigus vulgaris auto-antigens and multiple sclerosis non-self antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in auto-immune disease.
simplex virus DNA polymerase and is implicated as a foreign epitope inclved in the actiology or in remissions of multiple sclerosis. It has been shown capable of inducing the proliferation of autoreactive T-cell clones isolated from multiple sclerosis patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tolerisation; self-epitope; antigen; autoimmune disease; autoantigen; HLA; human leukocyte antigen; T-cell; thymocyte; pemphigus vulgaris; desmoglein; multiple sclerosis; herpes simplex virus; adenovirus; phosphomannomutase; human papillomavirus; Epstein-Barr virus; DNA polymerase; influenza; haemagglutinin; reovirus; sigma protein.

The invention relates to nucleic acids (AAH79386-AAH80036) encoding polymorphic variants of proteins (AAG98010-AAG98238) related to angiopolotetin, 4-hydroxybutyrate, dehydrogenase, adenosine triphosphate (ATP) dependent RNA helicase, major histocompatibility complex (MHC) Class I histocompatibility antigen and/or phosphoglycerate kinase. These cucleic acid single nucleotide polymorphisms (SDNPs) and the encoded proteins have potential immunosuppressive, immunostimulatory, cytostatic, antirheumatic, antisclerotic, antidiabetic, antinflammatory, cytostatic, antisclerotic, antidiabetic, antinflammatory, cytostatic, antisclerotic, antidiabetic, antidiabetic, antisclerotic, antidiabetic, antinflammatory, cytostatic, antisclerotic in therapy, vaccines, modulation of the expression and activity of protein related to angiopoletin, 4-hydroxybutyrate, dehydrogenase, adenosine triphosphate (ATP)-dependent RNA helicase, major histocompatibility complex (MHC) Class I histocompatibility antigen complex (MHC) Class I histocompatibility antigen and adaptive may be prevented, and/or treated by the above methods include multifactorial
                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                Human, single nucleotide polymorphism; SNP; angiopoietin; 4-hydroxybutyrate; dehydrogenase; protein therapy; adenosine triphosphate-dependent RNA helicase; andor histocompatibility antigen; MHC; phosphoglycerate kinase; immunosuppressive; immunostimulatory; antirheumatic; antisclerotic; antidiabetic; antihilammatory; cytostatic; antileukemic; neuroprotective; antimicrobial; gene therapy; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diseases with a genetic component, such as autcimmune diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, systemic lupus erythematosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, leukemia), diseases of the nervous system, an infection of pathogenic organisms. They may also be used to alter phenotypic traits such as longevity, appearance, strength, speed and endurance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polymorphic nucleic acids encoding e.g. angiopoietin, dehydrogenase, adenosine triphosphate-dependent RNA helicase and/or phosphoglycerate kinase, useful for diagnosing and treating, e.g. cancer, autoimmune

Pemphigus vulgaris auto-antigens and multiple sclerosis non-self antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in auto-immune disease.

Claim 2; Page 47; 58pp; English.

pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with the autoimmune disease. This peptide is an internal peptide of herpes

                                                         treating disorders mediated by deregulation of the Mitogen Activated Protein Kinase (MAPK) pathway, related to structural and/or functional alterations of the endosomal/lysosomal system. The compounds are tested for their ability to inhibit, on late endosomas/lysosomes, the interaction of pl4 with MPI or the interaction of pl4/MPI complex with components of MAPK pathway. The method is useful for identifying compounds for treating disorders such as lysosomal storage/transport diseases, e.g., cystic fibrosis, Nieman-Pick-disease and diseases that apfect lysosomal secretion, e.g., asthma or Chediak-Higashi syndrome. The present sequence is a peptide fragment of murine pl4 protein, which was obtained in an example from the invention

                             The present invention describes a single chain polypeptide comprising clostridial neurotoxin light and heavy chains. The single chain polypeptide comprises 2 domains: the first domain is a clostridial neurotoxin light chain, or its fragment or variant, which is capable of neurotoxin light chain, or its fragment or variant, which is capable of cleaving one or more vesicle or plasma membrane associated proteins casential to exceytosis; the second domain is a clostridial neurotoxin heavy chain H-N portion, or its fragment or variant, which is capable of translocating the polypeptide into a cell and/or increasing the compared to the solubility of the polypeptide compared to the solubility of the first commain on its own. The second domain lacks a functional C-terminal part of a clostridial neurotoxin heavy chain, designated H-C, which renders the natural cell surface receptors to which native clostridial neurotoxin cof a clostridial neurotoxin to which native clostridial neurotoxin chinds. Also described is a nucleic acid molecule encoding the single chain polypeptide described above. The single chain polypeptide can be used as positive controls for toxin assays, as contibacterial activity, and can be used in vaccines. The single chain polypeptides can be used as positive controls for toxin assays, or for developing vaccines against clostridial toxin. The polypeptides are also cuseful as non-toxic standards for the assessment and development of in foodstuffs or environmental samples. The present sequence is used in the angent of the present sequence is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New single chain polypeptides comprising clostridial neurotoxin light and heavy chains, useful as positive controls for toxin assays, or for developing vaccines against clostridial toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       single chain polypeptide; clostridial neurotoxin light chain; clostridial neurotoxin heavy chain; Clostridium; neurotoxin; exocytosis; antibacterial; vaccine; toxin assay; clostridial toxin; detection;

The present invention describes a single chain polypeptide comprising clostridial neurotoxin light and heavy chains. The single chain polypeptide comprises 2 domains: the first domain is a clostridial neurotoxin light chain, or its fragment or variant, which is capable of neurotoxin light chain, or its fragment or variant, which is capable of cleaving one or more vesicle or plasma membrane associated proteins or essential to excytosis; the second domain is a clostridial neurotoxin heavy chain H-N portion, or its fragment or variant, which is capable of translocating the polypeptide compared to the solubility of the first domain on its own. The second domain lacks a functional C-terminal part of a clostridial neurotoxin heavy chain, designated H-C, which renders the neural cell surface receptors to which native clostridial neurotoxin to binds. Also described is a nucleic acid molecule encoding the single chain polypeptide described above. The single chain polypeptide acivity, and can be used an positive controls for toxin assays, as continuation of the symphesis of therapeutic molecules, or for developing vaccines against clostridial toxin. The polypeptides are also cuesful as non-toxic standards for the areasent and development of in vitro assays for detection of functional botulinum or tetanus neurotoxins the present sequence is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Murine; antiasthmatic; immunomodulator; asthma; Mitogen Activated Protein Kinase; MAPK; endosome; lysosome; p14; lysosomal storage disease; lysosomal transport disease; cystic fibrosis; Nieman-Pick-disease; lysosomal secretion; Chediak-Higashi syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying compounds for treating disorders mediated by deregulation of mitogen activated protein kinase pathway related to structural and/or functional alterations of endosomal/lysosomal system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .;

The present invention describes a method (MI) for analysing cleavage of a polymer. MI comprises: (a) providing a sample of the polymer on one side of the polymer molecules having been labeled at a position on one side of the potential cleavage site with a first isotopic label and a portion of the potential cleavage site with a second isotopic label; (b) incubating the sample under conditions suitable for cleavage at the potential cleavage site with a second isotopic label; (b) incubating the sample under conditions suitable for cleavage at the potential cleavage site; and (c) analysing the mass(es) of any cleaved fragments by mass spectrometry and thereby determining whether and/or where cleavage has taken place. MI is useful for analysing cleavage of a polymer, where the polymer is a linear polymer, and unknown enzymes, cor protein. Methods from the present invention can be used in discovering new or improved synthetic substrates for both known and unknown enzymes, c. e. enzymes identified from the human genome. The methods are also useful to identify the sequence origin, and in screening methods to identify new substrates for enzymes, in in vivo/ex vivo/in vitro peptide, and in assaying methods in coligonucleotide or peptide sequencing and in measuring differential colymerides in an vivo/ex vivo/in vitro peptide. The molicoring the cleavage of polymerides or polymer or polymer peptides are useful for monitoring the cleavage of substrates. ABB57805 to ABB57805 represent peptides used in the cleavage of exemplification of the present invention Analyzing cleavage of polymer, by providing polymer sample, incubating the sample with labeled isotope for cleavage at potential cleavage site, and analyzing the masses of any uncleaved fragments by mass spectrometry. Analyzing cleavage of polymer, by providing polymer sample, incubating the sample with labeled isotope for cleavage at potential cleavage site, and analyzing the masses of any uncleaved fragments by mass spectrometry

```
The present invention describes a method (M1) for analysing cleavage of a polymer. M1 comprises: (a) providing a sample of the polymer molecules having been labeled at a position one side of the potential cleavage site with a first isotopic label and a portion of the potential cleavage site with a first isotopic label; (b) circubating the sample under conditions suitable for cleavage at the conditions suitable for cleavage at the contential cleavage site; and (c) analysing the mass(es) of any cleaved crayments by mass spectrometry and thereby determining whether and/or where cleavage has taken place. M1 is useful for analysing cleavage of polymer, where the polymer is a linear polymer, and comprises a peptide corping to improved synthetic substrates for both known and unknown enzymes, corp protein. Methods from the purseent invention can be used in discovering new or improved synthetic substrates for both known and unknown enzymes, corporatify the sequence origin, and in screening methods are also clearify new substrates for enzymes, in positional peptide scanning cleavage of for oligonucleotide or peptide sequencing and in measuring differential protein expression. The methods are useful for mentoring the cleavage of colymerics are useful for mentoring the cleavage of polymer ensymptotides, and for determining optimal polymer substrates. Applying the cleavage of colymerics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gapa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a human L-asparaginase polypeptide designated 24.53, and the polymucleotide encoding it. Also disclosed is the method for preparing the polypeptide using DNA recombination techniques. The application of the polypeptide is in treating diseases including diabetes and tumours. The current sequence represents the human L-asparaginase N-terminal peptide sequence
polynucleotides and specific antibodies. Immunotherapy, Anti-HIV. The compounds are useful for inducing an immune response and administering immunotherapy to a subject with AIDS. The present sequence represents a specific example of a HIV SL9 peptide epitope derived compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A human L-asparaginase 24.53 polypeptide L-asparaginase 24.53 and the polynucleotide encoding it.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel mouse myoglobulin I-111-18.48 (s ABP55158) and to a polynucleotide (see ABV75939) encoding it. The prote is useful for the treatment of several diseases, e.g. diabetes and tumours. The present sequence is an N-terminal peptide fragment of the myoglobulin, which was used in an example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A novel mouse myoglobulin I-111-18.48 polypeptide, useful for treating several diseases e.g. diabetes and tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mass spectrometry; polymer; analysis; cleavage; substrate specificity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

15-mer peptides AAW42261-77 are identified as ligands of a blotinylated, cross-linked interleukin-8 (IL-8) target, using the method of the invention. This novel method identifies compounds which interact with a target molecule, and comprises contacting a screening molecule with a target molecule, or the enantiomer if the target molecule so target molecule or the enantiomer if the target molecule are compounds which have a desired interaction with the target molecule are selected, and the ability of their enantiomer to interact with the target compounds which have a desired interaction with the target of selected, and the ability of their enantiomer to interact with the target selected is steated. Ligands for a target protein an electing one or more compounds to variegated compound library, and then selecting one or more compounds to variegated compound library, and then selecting one or more compounds to target protein (a D-target protein) the methods can be used for identifying agonists or arganists of targets such as receptors, enzymes, DNA binding proteins caregomists of targets such as receptors, enzymes, DNA binding proteins or signal transduction proteins. The methods can provide a structurally selective approach in addition to scoring for interaction of functional groups. They provide a powerful selection method that allows for the production of ligands with the same diversity as peptides but, with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New anti-HIV (SL9) compounds, useful for inducing an immune response and administering immunotherapy to a subject with AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    greatly improved pharmacokinetic profiles needed for drug activity
Identifying compounds which interact with target molecules - using enantiomers of the target molecules and testing of enantiomers of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 31; DB 2; Length 15; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                            The present invention describes backbone cyclised somatostatin analogues (I) that incorporates at least one building unit containing one nitrogen atom of the peptide backbone connected to a bridging group (comprising an amide, thioether, thioester or disulfide) where at least one building unit is connected via the bridging group to form a cyclic structure with a molety selected from the group consisting of a second building unit, the side chain of an amino acid residue of the sequence or the N-terminal amino acid residue. (I) has antiarteriosclerotic, immunosuppressive, cytostatic, antidiabetic, antiinflammatory and analgesic activities, and can be used as a somatostatin receptor ligand. (I) are useful in the treatment of atherosclerosis, autoimmune diseases, cancers, diabetic-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              associated complications, endocrine disorders, inflammation, gastrointestinal disorders, pancreatitis, post-surgical pain, and restencesis. (I) can also be used in the diagnosis of cancer, by imaging the existence of metastases, it being labeled with a detectable probe. The present sequence represents a multiple parallel synthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacteriophage peptide library; peptide epitope; therapeutic target; variegated compound library; interleukin-8; IL-8.
                                                                                                                                                                                                                                             New backbone cyclized somatostatin analogs are e.g. useful in the treatment of atherosclerosis, autoimmune diseases and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Biotinylated cross-linked interleukin-8 15-mer peptide ligand 2.

unit is connected via the bridging group to form a cyclic structure with a moiety selected from the group consisting of a second building unit, the side chain of an amino acid residue of the sequence or the N-terminal amino acid residue. (I) has antiarteriosclerotic, immunosuppressive, cytostatic, antidiabettic, antiniflammatory and analgesic activities, and can be used as a somatostatin receptor ligand. (I) are useful in the treatment of atherosclerosis, autoimmune diseases, cancers, diabetic associated complications, andoorine disorders, inflammation, associated complications, pancreatitis, post-surgical pain, and restencis. (I) can also be used in the diagnosis of cancer, by imaging the present sequence represents a multiple parallel synthesis groups are from the present invention.

The present invention describes backbone cyclised somatostatin analogues

(I) that incorporates at least one building unit containing one nitrogen

atom of the peptide backbone connected to a bridging group (comprising an

amide, thioether, thioester or disulfide) where at least one building

cuit is connected via the bridging group to form a cyclic structure with

a moiety selected from the group consisting of a second building unit,

the side chain of an amino acid residue of the sequence or the N-terminal

cuit amino acid residue. (I) has antiarteriosclerotic, immunosuppressive,

cytostatic, antidiabetic, antiinflammatory and analgesic activities, and

corporated complications, endocrine disorders, inflammation,

can be used as a somatostatin andocrine disorders, inflammation,

casociated complications, andocrine disorders, inflammation,

casociated complications, endocrine disorders, inflammation,

concessed to metastases, it being labeled with a detectable probe.

The present sequence represents a multiple parallel synthesis

concessed to metastases.

This sequence represents a variant human potassium channel pore domain peptide sequence used in the identification and isolation of human K+Hnov peptide sequence used in the identification and isolation of human K+Hnov proteins have a high degree of homology convex channel activity. K+Hnov cDNAs were isolated by extension of expressed sequence tags (BSTS) which were related but not identical to known human potassium channels. Potential polymorphisms detected as sequence variants between multiple independent clones. Potassium channels have critical coles in various cell types and blochemical pathways. Defective potassium channels are known to cause four human diseases: episodic ataxia with channels are known to cause four human diseases: episodic ataxia with channels are known to cause four human diseases: episodic ataxia with classium channels are critical components of virtually all cells, it is likely that abnormal potassium channels are also implicated in certain renal, cardiovascular and central nervous system (CNS) disorders. Nucleotides encoding krehnov proteins and the DNA sequences encoding cells grow and the DNA sequences encoding
                                                                                                                                                                                                                                                                                                                                                                         ö
the autoimmune disease. This peptide is an internal peptide of recovirus type 3 sigma 2 protein and is implicated as a foreign epitope involved in the actiology or in remissions of multiple sclerosis. It has been shown capable of inducing the proliferation of autoreactive T-cell clones isolated from multiple sclerosis patients. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acids encoding mammalian K+Hnov potassium channel proteins, useful for the diagnosis and treatment of episodic ataxia with myokymia, cardiac arrhythmia, epilepsy and Bartter's syndrome.

them. They may be used to produce compositions that modulate the expression and function of the K+Hnov protein and in studying the biochemical pathways associated with it. They may also be used for the recombinant production of K+Hnov protein in fermentation cultures. Additionally, such nucleotides may be used in gene therapy protocols for the treatment of diseases associated with abnormal potassium channels
                                                                                                                                                                                                                                                                                                                                                                                                                                      somatotropin release inhibiting factor; somatostatin receptor subtype; synthesis; antiarterioscierotic; immunosuppressive; cytostatic; cancer; antidiabetic; antiinflammatory; somatostatin receptor ligand; atheroscierosis; autoimmune disease; diabetic-associated complication; endocrine disorder; inflammation; gastrointestinal disorder; restenosis;

Claim 2; Page 46; 58pp; English. Pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myshin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen, or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MRC class II protein, such as HLA -DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with

This invention relates to novel isolated, recombinant polypeptides that are involved in nucleotide transport and metabolism. Specifically, it refers to the identification and functional characterisation of enzymes that are antimicrobial targets from pathogenic bacteria and of enzymes that are antimicrobial targets from pathogenic bacteria, namely seudomonas aeruginosa, Escherichia coli, Staphylococcus auceus, Pseudomonas aeruginosa, Escherichia coli, Enterococcus facealis, Haemophilus influenzae and Streptococcus pneumoniae. These enzymes are decxyuridine 5' triphosphate professional are decxyuridine 5' triphosphate synthetase (PRSA), and prophosphothosae (Mt), phosphoribosylyprophosphate synthase (thyA), uridylate kinase (FWRH), ribose phosphate pyrophosphokinase and cytidine/ decxytidylate deaminase family protein (YHFC). The present invention describes modulators, inhibitors, protein (YHFC). The present invention describes modulators, inhibitors, protein (YHFC). The present for compositions of this invention can be used in the development of drugs to treat, for example, impetigo, cystitis, meningitis, osteomyelitis, otitis media and bacteraemia.

Furthermore, determination of the crystalline structure can be useful for the design of modulators as potential therapeutic agents. This peptide sequence is an Enterococcus facealis thyA peptide derived from a tryptic mass spectrum of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Chimeric immunoglobulin with CDR loop substd. for T and or B cell epitope

```
chimeric immunoglobulins (Ig) having a CDR loop of the parent Ig replaced with a foreign peptide sequence corresponding to a T - or B - cell epitope, may be used in vaccine compositions to enhance an immune response to a pathogen. Chimeric Ig comprising a B-cell epitope can also be used to label B-cells, to test the ability of a subject to mount a humoural response to a particular B-cell epitope or to collect B-cells which recognise the epitope. An antibody comprising a chimeric Ig molecule which comprises an antigen binding site may be used in disgnostic assays to detect the presence of a particular target antigen, which binds to the antibody binding site. Sequences of B-cell epitopes are given in AAR99503 - 08. Sequences of T-cell epitopes are given in AAR99503 cell epitope refers to a peptide which is able to bind to an immunoglobulin receptor of a B-cell and participate in the induction of antibody production by that B-cell. This peptide is an immunodominant B-cell epitope in site B of influenza virus HAI haemagglutinin
- useful in vaccine composition to enhance immune response to pathogens

The invention relates to a novel composition comprising one or more peptides or nucleic acids encoding an HLA binding peptide. The composition further comprises an HTL epitope. It also comprises a spacer composition further comprises an HTL epitope. It also comprises a spacer molecule, a carrier, an WHC targeting sequence or a lipid. The peptides are incorporated as part of a liposome. The peptide is from an antigen selected from prostate specific antigen (PSM), prostate specific membrane antigen (PSM), hepatitis B virus (HBV) antigen, hepatitis C virus (HCV) antigen, malignant melanoma antigen (MAGB), Epstein Barr virus, human immunodeficiency type-2 (HIV-2), antigen, malignant melanoma antigen (MAGB), Epstein Barr virus, human immunodeficiency type-1 (HIV-I), human immunodeficiency type-2 (HIV-2), murine, base virus, Mycobacterium tuberculosis (MT), p53, murine p53 (Mp53), CEA, HERZ/neu, and tyrosine kinase related protein (TKP). The composition is useful for preventing or treating viral infections or cancer, such as prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, cervical carcinoma, lymphoma, CMV or chondyloma acuminatum. The composition is also be used for diagnosing such diseases. This sequence represents a peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antiinflammatory; gene therapy; peptidyl arginine deaminase inhibitor; citrullinated peptide, major histocompatiblity class II molecule; epitope; myelin basic protein; MBP; glial fibrillary acid protein; GFAP; diagnosis; autoimmune disorder; rheumatoid arthritis; multiple sclerosis.

The invention relates to a citrullinated peptide, binding with increased affinity to a major histocompatibility (MHC) class II molecule having a shared epitope comprising an amino acid sequence selected from ADR99775-ADR99811, given in the specification. The citrullinated myelin basic protein (MBP) and/or glial fibrillary acid protein (GRAP) peptide is useful in preparing a composition for diagnosing or treating autoimmune disorder, e.g., rheumatoid arthritis or multiple sclerosis. This sequence represents a fragment of the human aggrecan protein (as 280-292) in which the ABP residue at position 6 is altered to an Arg residue and used to generate a citrullinated peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pathogenic bacteria; deoxyuridine 5' triphosphate nucleotidohydrolase; dut; guanylate kinase; KGTM; adenine phosphoribosyltransferase; APT; phosphoribosylpyrophosphate synthetase; PRSA; thymidylate synthase; thyA; KTMY; uridylate kinase; PYRH; ribose phosphate pyrophosphokinase; cytidine, deoxyctidylate deaminase; YHFC; impetigo; cystitis; meningitis; osteomyelitis; otitis media; bacteraemia; nucleotide transport; antimicrobial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Edwards A, Dharamsi A, Vedadi M, Domagala M, Mansoury K;

                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a novel method for stimulating CD8 or CD4 T cells for the immuno-stimulation of mammals and the determination of the cells for the immuno-stimulation of mammals and the determination of the celponse to an antigen (I). The method comprises (i) dividing the amino acids whereby adjacent or neighbouring fragments are in the whole amino acids, whereby adjacent or neighbouring fragments are in the whole antigen sequence, (ii) synthesizing a peptide library containing (II); and (iii) incubating the CD8 and/or CD4 Tlymphocytes in a suspension comprising (II) in a single culture vessel. The method is used to immunociatimulate T cells of mammals, particularly humans, and is also useful for diagnostic purposes to determine if a mammal, especially human, has previously immunologically responded to a specific protein, and to or in vitro immuno-stimulation of mammalian, more preferably human T transfered is the stimulated T lymphocytes are expanded and can be transfered and can be
                                                                                                                                                                                                          and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      transfused into a patient. The invention relates to a novel composition comprising one or more peptides or nucleic acids encoding an HLA binding peptide. The composition further comprises an HTL epitope. It also comprises a spacer molecule, a carrier, an MHC targeting sequence or a lipid. The peptides are incorporated as part of a liposome. The peptide is from an antigen and incorporated profeste specific antigen (PSA), prostets specific membrane antigen, malignant melanoma antigen (MAGE), Epstein Barr virus, human immunodeficiency type-2, (HIV-2), Papilloma virus, Lassa virus, Mycobacterium tuberculosis (MT), p53, cmvine p53 (mp53), CEA, HER2/neu, and tyrosine kinase related protein (CTKP). The composition is useful for preventing or treating viral infections or cancer, such as prostate cancer, hepatitis B, hepatitis C, ALDS, remal carcinoma, cervical carcinoma, lymphoma, CMV or chondyloma cuminatum. The composition is also be used for diagnosing such diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                             wew composition of peptides and nucleic acids capable of binding Major Histocompatibility Complex molecules, useful for diagnosing, preventing or treating viral infections or cancer, such as prostate cancer, hepatitis B or AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cytostatic; hepatotropic; virucide; antiinflammatory; anti-HIV; gene therapy; vaccine; HLA binding peptide; HTL epitope; liposome; prostate specific antigen; prostate specific membrane antigen; hepatitis B virus antigen; hepatitis C virus antigen; malignant melanoma antigen; MGGB; Epstein Barr virus; cancer; prostate cancer; AIDS; renal carcinoma; cervical carcinoma; lymphoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       39.1%; Score 34; DB 8; Length 9; 83.3%; Pred. No. 1.8e+06; tive 1; Mismatches 0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a peptide of the invention
                                                                                                                                        Claim 1; SEQ ID NO 2255; 186pp; English.

The present invention relates to oligonucleotides (see AAL26793-AAL34659)
encoding polymorphic variants of proteins related to amylases, amyloid
proteins, anglopoletin, apoptosis related proteins, cadherin, cyclin,
proteins, anglopoletin, papptosis related proteins, cycoxine,
complement related proteins, cyrochromes, kinesins, cytoxines,
interferons, interleukins, G-protein coupled receptors and thioesterases.
The present sequence is a peptide encoded by one such oligonucleotide.
The oligonucleotides and the peptides encoded by them may be used in the
prevention, diagnosis and treatment of diseases associated with
chaptopriste expression of the proteins listed above. Disorders that may
be prevented, diagnosed and/or treated include multifactorial diseases
with a genetic component, such as autoimmune diseases (e.g. rheumatoid
arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus
and disease), inflammation, cancer (e.g. cancers of the bladder,
brain, breast, colon and kidney, leukaemia), diseases of the nervous
system and an infection of pathogenic organisms
                                                                                                                                                                                                                                                                                                                                                                                                                            Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, oncogenes and histones, useful for diagnosing and treating, e.g. cancer, autoimmune diseases and infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigen-specific stimulation; T-lymphocyte; CD8 stimulation; pp65; CD4 stimulation; immuno-stimulation; IE1; lower matrix phosphoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human cytomegalovirus strain AD169 IB1 peptide fragment SEQ ID 62

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to treating chronic hepatitis, by administering a vaccine comprising immunogenic particles having recombinant hepatitis B core (HBC) chimeric protein molecules (where truncated Hbc molecules are linked Nuterminally or Cterminally to an immunogenic epitope), that stimulate T cell production, to a patient chronically infected with comparties B virus, and maintaining patient for time sufficient to induce CT cells activated against HBC. The chimeric proteins are still capable self-assembling into particles upon expression in a host cell and are substantially free of binding to mucleic acids, and the particles display compared gramma-producing CD8+, CD4+ T cells and cyctoxic T lymphocytes or more of gamma-producing CD8+, CD4+ T cells and cyctoxic T lymphocytes or more of gamma-producing CD8+, CD4+ T cells and cyctoxic T lymphocytes against hepatitis B virus, involving administering to a patient correspond comprising immunogenic particles dissolved or dispersed in a diluent containing one or both of an agonist of toll-like receptor 4 and creeptor 9 (THR 4 and TLR-9), the immunogenic particles comprising HBC chimeric protein molecules and maintaining the patient for a sufficient time to induce T cells activated against HBC. The immunogenic epitopes con may be B cell or T cell epitopes. The chimeric vaccine is useful for treating a patient chronically infected with hepatitis B virus, The present sequence is a B cell epitope suitable for inclusion in the present exquence in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immunosuppressive; immunostimulatory; antiinflammatory; cytostatic; neuroprotective; antimicrobial; gene therapy; vaccine; amylase; cancer; amylod protein; angiopoletin; apoptosis related protein; catherin; cyclin; polymerase; oncogene; histone; kinase; colony stimulating factor; complement related protein; cytochrome; kinase; colony stimulating factor; interleukin; Grprotein coupled receptor; thioesterase; intlammation; multifactorial disease; autoimmune disease; infection;

The invention relates to a novel recombinant chimeric Hepatitis B virus nucleocaspid (core) protein (HBC), up to 600 or 380 amino acid residues in length. The chimeric protein is engineered for both enhanced stability of self-assembled particles and the substantial absence of nucleic acid binding by the particles and the substantial absence of nucleic acid binding by the particles. The invention further comprises: a recombinant HBC protein chimeric molecule that has a length of 135-365 amino acid residues and contains four peptide-linked amino acid residue sequence domains from the N-terminus that are denominated Domains I, II, III and IV. The invention also provides nucleic acids, polypeptides, host cells, coetors and transgenic animals used in the methods che invention. The chimeric compositions of the invention are activities. The methods and compositions of the present invention are useful in the fields of immunology and protein engineering, in particular for using a chimeric hepatitis B virus nucleocapsid protein as an immunogen in a vaccine for Hepatitis B virus nucleocapsid protein related
                                                                                                                                                                                                                                                                                                                                   New recombinant chimer hepatitis B core (HBC) protein molecules useful in the fields of immunology and protein engineering, in particular as an immunogen in a vaccine for Hepatitis B infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HBV; chronic hepatitis; HBc; nucleocapsid core protein; vaccine; immunogen; mmunogenic epitope; T cell; B cell; CD8+ cell; CD4+ cell; cytotoxic T lymphocyte; toll-like receptor 4; toll-like receptor 9; TRR-4; TLR-9; epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a recombinant chimer hepatitis B core (HBC)
protein molecule that includes a peptide-bonded heterologous immunogenic
epitope at the N-terminus in the HBC immunodeninant loop or the C-
terminus of the Chimer, or a heterologous linker residue for a conjugated
epitope present in the loop. The invention also relates to an immunogenic
particle comprising the recombinant hepatitis B core chimeric protein
molecules, a vaccine comprising the immunogenic particles dissolved or
dispersed in a diluent, a nucleic acid that encodes a recombinant HBC
protein molecule or its variant, analogue, or complement and a method for
inducing an immune response in an incoulated and maintaining the inoculated
animal for a period of time sufficient to enable development of an immune
cresponse. The recombinant chimer hepatitis B core protein molecule is
used in an immunogenic particle for preparing a vaccine useful for
inducing an immune response in an inculated host animal. This sequence
represents an HBC protein immunogenic B cell epitope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant chimer hepatitis B core protein molecule useful for preparing accine or inoculum includes peptide-bonded heterologous immunogenic epitope at N-terminus in the hepatitis B core immunodominant loop or C-terminus of the chimer.
                                                                 Recombinant chimer hepatitis B core protein; HBc; immunogenic epitope; HBc immunodominant loop; immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       transgenic animal, Hepatitis B virus nucleocaspid core protein; HBc; enhanced stability; hepatotropic; virucide; immunology; protein engineering; immunogen; vaccine; Hepatitis B infection.
                    Recombinant chimer hepatitis B core protein immunogenic epitope #6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

This invention relates to novel recombinant immunogenic chimeric avian hepatitis B core (AHBC) nucleocapsid proteins. Specifically, it refers to an AHBC protein that has been engineered to display an immunogenic B cell or T cell epitope, exhibit enhanced stability and an absence of nucleic acid binding as a self assembled particle. The present invention acid binding and chimeric AHBC protein as truncated at the C-terminus and containing introduced cysteine residues that confers an enhanced stability in aqueous solution, an increased yield and more immunogenicity than similar conjugates that lack N or C-terminal cysteines.

Chan similar conjugates that lack N or C-terminal cysteines.

Chan similar conjugates that lack N or C-terminal cysteines.

Chase chimeric particles that are substantially free of nucleic acid binding. As such, particles that are substantially free of nucleic acid binding. As such, these compacting a vaccine to produce antibodies. It can also be useful for developing a vaccine to produce antibodies. It can also be useful for developing a vaccine to produce antibodies. Con also be useful for developing exhibit immunogen is derived.

Can also be useful for developing exhibit immunostimulant, antibacterial and virucidal activities. This peptide sequence is an exemplary B-cell epitope peptide immunogen useful for both linkage to the linker residue after expression of a contemplated chimer and for expression within an entire and stream and settles of the contemplated chimer and for expression within an entire and succession which in a contemplated chimer and for expression within an entire and succession within an entire and succession services and succession within an entire and succession services and succession succession services and succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession succession 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New recombinant chimer avian hepatitis B core protein molecule, useful as an immunogen for inducing a B cell or T cell response to produce antibodies, or as a vaccine against pathogens.
                                                                                                                               Influenza A virus B-cell peptide epitope expressed by HBc chimer Seq 17.
                                                                                                                                                                              immunogenic; avian hepatitis B virus; nucleocapsid; self assembled particle; immunogen; inoculum; vaccine; immunostimulant; antibacterial; virucidal; B-cell epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 39; DB 7

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BXXXB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a method of treating chronic hepatitis comprising administering to a patient a T cell-stimulating amount of a vaccine comprising immunogenic particles dissolved or dispersed in a diluent, where the immunogenic particles consists of recombinant hepatitis B core (HBC) chimeric protein molecules, and maintaining the patient to induce T cells activated against HBC. The methods and compositions of the present invention are useful for treating chromic hepatitis B infection. This is the amino acid sequence of a chimeric hepatitis B virus related B-cell epitope useful for expression within the HBV chimer at the N-terminus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating chronic hepatitis B infection by administering a T cellstimulating vaccine containing immunogenic particles having recombinant carboxy-terminal truncated hepatitis B core (HBC) chimeric protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       hepatotropic, virucide, antiinflammatory; chronic hepatitis; vaccine; recombinant hepatitis B core chimeric protein; HBc chimeric protein; hepatitis B infection; T-cel stimulator; B-cell epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a conjugate (A) comprising a strategically modified hepatitis B core (HBC) protein (I) attached to a hapten, where (I) includes amino acide (aa) 10-140 of the wild type HBC 183 aa sequence (given in AAY28674) and additionally has an insert (II) in the region corresponding to aa's 50-100, where the insert is of 1 to about 40 aa's and contains a chemically reactive aa residue linked to the hapten. A vaccine containing (A), optionally in the form of particles, is used to induce a protective antibody response against the pathogen from which the hapten is derived, in humans or other animals. These pathogens which the hapten is derived, in humans or other animals. These pathogens to recomment the low reactivity of aa side chains in native HBC protein, increasing the reactivity with hapten and resulting in conjugates of improved immunogenicity. Modified HBC can be derivatised in the form of particles by well-defined chemical methods, and is unlikely to cause immunological side-effects. AAY29675 to AAY29735 represent polypeptide haptens used in an example from the present invention
                                                                                                                                                                                                         ô
the autoimmune disease. This peptide is an internal peptide of influenza type A haemagglutinin protein and is implicated as a foreign epitope involved in the actiology or in remissions of multiple sclerosis. It has been shown capable of inducing the proliferation of autoreactive T-cell clones isolated from multiple sclerosis patients. (Updated on 27-AUG-2003

```
The invention relates to a recombinant hepadnavirus nucleocapsid protein,

i.e. a chimeric hepatitis B core (HBC) protein (I), displaying one or
concert immunogenic epitopes at the N-terminus, HBC immunogenic loop (I) or
C-terminus, or having a heterologous linker for a conjugated epitope in
(I), and containing a Cys residue at, or near, the C-terminus that
confers enhanced stability to the particles. A vaccine comprising (I) is
useful for inducing an immune response in an inoculated host animal, by
inoculating a host animal with the vaccine, and maintaining that
inoculated animal for a time period sufficient for that animal to develop
an immune response. The immunogenic particles formed using (I) are
substantially free of binding to nucleic acids, and are most stable than
the particle formed from otherwise identical HBC chimer that lacks the C-
creminal residue or in which a C-terminal Cys is replaced by another
residue. The chimer particles are most stable on storage in aqueous
compositions that are particles are most stable on storage in aqueous
compositions that are particles of similar sequence that lack any C-
terminal Cys residues. The chimer molecule exhibitist the self-assembly
cypically prepared in higher yield than similar particles are
cof a C-terminal Cys. The particles are often far more immunogenic than
the similar conjugates that lack a C-terminal Cys. Immunogenic than
the similar particles assembled from thimer molecules are enhanced as compared to
similar particles assembled from chimer molecules are enhanced so compared to
similar particles assembled from chimer molecules are enhanced as compared to
similar particles assembled from chimer molecules are enhanced so compared to
certainal Cys. AAUS3802-AAUS3997 represent immunogenic HBC particles amino
certain and related sequences of the invention
Novel recombinant hepadnavirus nucleocapsid protein, termed as chimeric hepatitis B core protein, displays immunogenic epitopes at N-terminus, HBc immunogenic loop with linker for conjugated epitope and C-terminus.
                                                                                                                                                                                                                                                                                       Disclosure, Page 35, 289pp, English,

Pemphigus vulgaris auto-antigens and multiple sclerosis non-self antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in auto-immune disease.

Claim 2; Page 46; 58pp; English.

pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with

Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a Chlamydia infection in an animal. Methods from the present invention can be used for eliciting presence of Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia in a patient; to stimulate and/or expand T cells infection. ABL92194 to ABL92199 and ABB94096 to ABB943174 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chlamydial infection, Chlamydia, vaccine, detection, diagnosis, antigen, antibacterial; immunostimulant, immune response;
Chlamydia-specific T-cell response.
 and methods for the treatment and diagnosis of chlamydial infection. The

              compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes polyci inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease
                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                          å
                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                           This invention describes a novel cosmetic composition which comprises a peptide with high affinity for keratinic materials covalently linked to a cosmetic active agent (including dyes, hair conditioners, combability improvers, surfactants, anidoanines, betaine esters, esterquats, fatty alcohols, moisturisers, vitamins, provitamins, bounce improvers, fatty salcohols, moisturisers, vitamins, provitamins, bounce improvers, silicone polyols and thites. Preferred agents include polymers, silicone polyols and chitosan. The composition is useful for cosmetic treatment of human or animal keratinic materials, especially as a hair dye. The peptide targets the active agent to keratinic materials. The invention describes a dye/amino acid conjugate prepared by reacting Reactive Red 2 with Di-lysine hydrochloride. ADI32195-ADI32295 represent peptide linkers used to make the cosmetic constructs described in the
                                                                                             Cosmetic composition, especially hair dye, comprises a peptide with high affinity for keratinic materials covalently linked to a cosmetic active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chlamydial infection; sexually transmitted disease; pelvic inflammatory disease; PlD; tubal obstruction; infertility; trachoma; blindness; acute respiratory tract infection; atherosclerosis; coronary heart disease; antibacterial.
                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Stromberg EJ;

The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serediagnosis and treatment of Chlamydia infection. Chlamydia antigens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atheroselerosis and coronary interpretation is oldered in the pathogenesis of atheroselerosis and coronary interpretation is sequence is a protein isolated in the
Isolated polypeptide for diagnosis and treatment of Chlamydia infection comprises immunogenic portion of Chlamydia antigen, which comprises amino acid sequence encoded by polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present peptide is provided in a specification relating to compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chlamydia polypeptides and fusion proteins useful for preventing pelvic inflammatory disease, trachoma, acute respiratory tract infections,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chlamydia; vaccine; infection; fusion protein; antigen; pelvic infilammatory disease; trachoma; atherosoclerosis; heart disease; acute respiratory tract infection (2011, 17529; OMCB). polymorphic membrane protein; pmp; thiol specific antioxidant; TSA.

growth factors and nucleic acids encoding them are useful for providing trophic support to a mammalian cell and/or for producing differentiation of a mammalian cell and/or for producing differentiation of a mammalian cell, in a patient suffering from peripheral neuropathy, amyotrophic lateral sclerosis, Alzheimer's disease, Parkinson's disease, diabetes, acquired immunodeficiency syndrome (AIDS), ischaemic stroke, acute brain injury, acute spinal cord injury, multiple sclerosis, nervous system tumours (e.g. neuroblastomas), or enteric diseases such as idiopathic constipation. The sequences are also useful for preventing or treating cellular degeneration or insufficiency in an individual, suffering from eosinopaenia, basopaenia, lymphopaenia, mencoytopaenia, neutropsenia, anaemia, thrombocytopaenia, lymphopaenia, degeneration, or congestive heart failure. The growth factors are also useful for promoting the survival of peripheral and central neuronal
       the F2a and F2c regions of the proteins GDNF, neurturin and artemin,
                                                                    from humans, mice or rats. This type of protein activates the growth factor receptor alphal-Ret protein-tyrosine kinase (GFRalphal-RET), but does not substantially activate GFRalpha2-RET or GFRalpha3-RET. The

Identifying and quantifying proteins/peptide sequences, comprises identifying peptides by liquid phase tandem mass spectroscopy sequencing and compiling data set/peptide profile containing collection of peptide sequences.

Example 3; Page 49; 84pp; English.

The invention relates to a novel method for identifying constituent proteins/peptide sequences or quantitating relative abundance of proteins in two samples, for a cell type, tissue or pathological sample using a database having peptide profile libraries with multiple protein/peptide sequences. The method comprises identifying peptide species by liquid

Example 6; Fig 9; 66pp; English

```
set/peptide profile. The novel method is useful in toxicology analysis.

In the method of the invention, there is no requirement for prior
knowledge about the functions of the responsive peptides or parental
proteins. Protein functions deduced from comparisons of profiles in a
database can be derived from very subtle physiological responses. For
instance, even though peptide levels may change among many measured
to an experimental treatment, coordinate changes among many measured
to an experimental treatment, coordinate changes among many measured
to an experimental treatment, coordinate changes that phenotype. The
large number of peptides measured make it unlikely that an unrelated
physiological state will have an identical profile, even though this may
not be apparent when using conventional experiments that measure the
levels of one or a few proteins. Closely related profiles can be classed
together, thus improving the understanding of the underlying biological
basis of the classifications. This sequence represents a peptide
sequenced and quantified from a human lung tissue lysate sample in a
single liquid chromatography-mass spectrometry (LC-MS) analysis, used in
the method for the measurement of protein relative abundance in complex
                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Conformationally-restricted polypeptide; alpha-helical coiled coil; combinatorial library; macromolecular ligand; peptidomimetic; antibody;

The present sequence represents a linear ZnP peptide. This peptide was used to show that peptides with lactam bridges inhibit antibody binding more effectively than peptides without lactam bridges. The present peptide could inhibit antibody binding but not to such a high degree as lactam bridge peptides. The lactam bridge containing peptides can be used in a combinatorial library of alpha-helical polypeptides each of 15-50 amino acids, stabilised by at least one lactam bridge between non-adjacent residues and with a unique variation of amino acid residues in at least 3 positions. The library can be used to identify compounds that interact specifically with a particular macromolecular ligand, e.g.

The present invention describes a method for modulating the interaction

Claim 45; SEQ ID NO 99; 154pp; English.

proteins

Modulating the interaction between at least two different proteins by providing a compound capable of interfering with the receptor and the polypeptide interaction and presenting the compound to the different

₩.

```
contended by a functional cell-surface receptor, or its fragment or represented by a functional cell-surface receptor, or its fragment or variant or by a polypeptide having a binding site to the receptor, where at least a part of the binding site comprises at least one of the cat least a part of the binding site comprises at least one of the cat least a part of the binding site comprises at least one of the cat ragments, or variants, or homologues of the sequences, or fragments or variants of the homologues, comprising (i) providing a compound capable of interacting with the receptor and/or polypeptide to interfere with the compound of step (i) to at least two different proteins. The compound has neuroprotective, vulnerary, antidabetic and nephrotropic activities, and neuroprotective, vulnerary. The method is useful in modulating the content of interaction between at least two different proteins, where one of the proteins is represented by a functional cell-surface receptor, selected from the family of fibroblast growth factor receptors (FGFRs), and the other protein is the receptor ligand. A compound capable of modulating the interaction between at least two different proteins, where one of the proteins is represented by a functional cell-surface receptor, selected the interaction between at least two different proteins, where one of the proteins is the receptor ligand, can be used for treating normal, degenerated or damaged neural cell adhesion molecule (NCAM) presenting cells; solid tumour requiring neoangiogenesis, diseases and conditions of the central and peripheral nervous system, of the muscles or of various organs, e.g., postoperative nerve fibres, post-ischaemic damage, creanting from a stroke, Parkinson's disease, Alzheimer's disease, Alzheimer's disease, Huntington's disease, Alzheimer's disease, Alzheimer's disease, Huntington's disease, Alzheimer's disease, and conditions of the circular and peripheral merve fibres, post-ischaemic damage, creanting cerve degeneration as stroke, Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the circadian clock or neuro-man attacks minimus, displayed and conditions of the mood disporters, such as manic depression, diseases or conditions of the muscles including conditions with impaired function of neuro-muscular connections, such as after organ transplantation, or such as genetic or graduatic atrophic muscle disorders; degenerative conditions of the pancress such as diabetes mellitus type I and II, of the kidney such as nephrosis or of the heart, liver and bowel; for preventing cell death of heart muscle cells, such as after acute myocardial infarction, or after angiogenesis; for promoting wound-healing; for revascularisation; or for stimulating the ability to learn and/or the short and/or long-term memory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
